SUMMARY

“Business Analyst with 3 years of experience delivering **ERP**, **MES**, and workflow automation solutions for manufacturing businesses. Skilled in analyzing operations, defining As-Is/To-Be processes, and translating business needs into clear functional requirements for development. Experienced in taking solutions from requirements through implementation and go-live across production tracking, warehouse processes, machine–MES–ERP integration, internal approvals, and management reporting”.

EDUCATION

Mar 2019 – Mar 2023 **FPT GREENWICH UNIVERSITY**
Bachelor's Degree in **Information Technology**

SKILLS

Business Analysis & Workflow: Process Analysis, Reverse Engineering, As-Is / To-Be Workflows, Data Modeling, Requirement Elicitation.

UI/UX & Prototyping: User Flows, Screen Layouts, Wireframing, Menu Definition (Figma, Draw.io, Miro).

Enterprise Systems: B2B System Integration (SI), **ERP**, **MES**, **WMS**.

Documentation: Functional Specification, BRD, FRS, Use Cases, User Guides.

Testing & QA: Test Scenarios, UAT Facilitation, API Testing, UI Testing.

Power Platform & Tools: Power Apps, Power Automate, Power BI, JIRA, Postman.

Database & Programming: SQL, PostgreSQL, MongoDB, Python (Pandas).

Languages: English (Intermediate - communication and technical documentation).

EXPERIENCE

APVN Sealing Co., Ltd. | Oct 2025 - Present

ERP & MES Analyst

- Led business analysis for **ERP** and **MES** initiatives, covering As-Is/To-Be processes, requirement sign-off, solution proposals, implementation, and go-live.
- Implemented an end-to-end ERP workflow covering customer orders, production orders, packing, finished goods receipt, packing lists, and customer shipments.
- Defined BOM-based material planning and stock reservation rules, enabling the system to calculate shortages and generate purchasing demand.
- Delivered ERP–MES integration for machining and inspection equipment, synchronizing production orders and production results between both systems.
- Implemented inventory transactions and production costing processes, giving Accounting traceable data for receipts, issues, stock balances, and manufacturing costs.
- Built SQL-based dashboards for Procurement, Warehouse, and Production to monitor costs, purchasing trends, inventory aging, production orders, and machine status.
- Digitized Quality workflows for incoming inspection, finished goods, expiry alerts, calibration, packaging checks, and cross-department 8D approval.
- Automated leave and business-trip workflows using Power Apps, Power Automate, SharePoint, email notifications, approvals, and document archiving.

SMC Manufacturing (Vietnam) Co., Ltd | Dec 2023 – Oct 2025

IT Business Analyst

- Led requirements analysis across Sales, Warehouse, Production, Import–Export, and Accounting, translating operational needs into clear system requirements.
- Produced As-Is/To-Be workflows, BRD, FRS, business rules, use cases, and screen and data specifications for **ERP** development.
- Delivered an end-to-end **ERP** workflow connecting sales orders, inventory, production, shipment, accounting, and costing across five business functions.
- Implemented ERP integration with FAST Accounting, aligning operational transactions, inventory movements, accounting records, and costing results.
- Delivered a PDA/tablet warehouse application for receiving, issuing, stock transfers, packing, and real-time inventory updates.
- Implemented an IoT-based machine monitoring process with automated alerts for machine errors and abnormal operating conditions.
- Validated system functions across UI, API, and database layers using Postman and SQL, identifying requirement and data issues before go-live.
- Managed requirement changes, defects, priorities, and delivery progress in JIRA through implementation and go-live.
- Created user guides and delivered training, enabling business teams to adopt the new ERP workflows after deployment.

Business Analyst Internship

- Analyzed existing ERP, LMS, and Travel Booking solutions to understand their functional scope, system behavior, and potential business applications.
- Mapped available system functions to practical business processes, user needs, and operational use cases across different domains.
- Identified functional gaps and proposed how existing solutions could be adapted to support real business requirements.
- Prepared FRS, workflows, and solution proposals for internal review and further development.
- Presented system capabilities and solution approaches to prospective customers through product and solution demonstrations.
- Collected customer questions and feedback during demonstrations to clarify business needs and improve proposed solutions.

PROJECTS

Project Management System

Freelance Business Analyst & QA | 3 members

- Elicited current business processes directly from the client and defined the scope and requirements for a project management system.
- Standardized workflows across Project, Procurement, Warehouse, Production, Construction, and Accounting.
- Designed processes for project progress, finished goods, material consumption, cash inflows and outflows, project costs, receivables, and payables.
- Prepared BRD and FRS documents for client sign-off and developer implementation.
- Assessed system scalability, designed the database structure, and validated functions and data quality before client deployment.
- Conducted system demonstrations and created user guides for the client after implementation.
